

Master in Computer Vision *Barcelona*

Module: M1 Introduction to human and computer vision

Projects: Museum painting retrieval

Coordination: Ramon Morros / Verónica Vilaplana

ramon.morros@upc.edu / veronica.vilaplana@upc.edu

M1 – Content Based Image Retrieval

- **Main goal**

- To learn the basic concepts and techniques to build a simple query by example retrieval system for finding paintings in a museum image collection.

- **Scope**

- Image retrieval based on color, texture, text information
- Image retrieval based on keypoints and local descriptors
- Denoising, orientation correction and picture cropping
- Morphological filters to detect and remove overlying text from images
- Evaluation of system performance

- **Applicability**

- Almost any (small) query by example problem

M1 – Content Based Image Retrieval

Apply the knowledge, tools and concepts from lectures.

The Objective is **apply and use** the knowledge learned, **not** to make a perfect system!

Images:

- Can Framis museum
- Alfred Figueres expo
- Kode Bergen museum

There will be different query sets

- Simple (no rotation, one painting per image, ...)
- Challenging (rotated painting, large background, noisy images, multiple paintings, ...)

Dataset available at Virtual Campus

Project Flowchart

- **Stages**

- Image retrieval based on color histograms (1D, 2D, 3D, global, block and multiresolution)
- Background removal by color
- Detection and removal of overlaying text
- Image denoising
- Image retrieval based on color / textual / texture descriptors
- Image retrieval based on keypoints and local descriptors
- Orientation correction and picture cropping before retrieval
- Image clustering

Methodology

- **Groups of 4 students**
- Project organized in **6 sessions**
- Before each follow-up session
 - teams submit their homework (code + slides + results)
 - each student submits intra-group evaluation
 - each team read other teams slides and submit two questions for other teams
- **Every follow-up session**
 - each team asks two questions to two different teams (one for each team)
 - teams answer questions in class
 - teachers give feedback
- One hour class
 - ~40 min for discussions
 - ~20 min to present next week's work
- **Final session:**
 - oral presentation (all members)
 - written report

Timetable

DATE	TIME	Lecture
Mon. Oct. 4th	16:00 -18:00	Human Visual system and perception
Mon. Oct. 4th	18:00 - 19:00	Project Introduction
Wed. Oct. 6th	16:00 -18:00	Image formation and color representation
Mon. Oct. 11th	16:00 -18:00	HOMEWORK
Mon. Oct. 11th	18:00 - 19:00	HOMEWORK
Wed. Oct. 13th	16:00 -18:00	Image processing assessment and pixel-based processing
Mon. Oct. 18th	16:00 -18:00	Morphological and nonlinear filtering
Mon. Oct. 18th	18:00 - 19:00	Project follow-up
Wed. Oct. 20th	16:00 -18:00	Space-frequency representation, Fourier transform and linear filtering (I)
Mon. Oct. 25th	16:00 -18:00	Space-frequency representation, Fourier transform and linear filtering (II)
Mon. Oct. 25th	18:00 -19:00	Project follow-up
Wed. Oct. 27th	16:00 -18:00	Space-frequency representation, Fourier transform and linear filtering (III)
Mon. Nov. 1st	16:00 -18:00	HOLIDAY
Mon. Nov. 1st	18:00 -19:00	HOLIDAY
Wed. Nov. 3rd	16:00 -18:00	Feature extraction
Wen. Nov. 3rd	18:00 -19:00	Project follow-up
Mon. Nov. 8th	16:00 -18:00	Grouping, segmentation and classification (I)
Mon. Nov. 8th	18:00 - 19:00	Project follow-up
Wed. Nov. 10th	16:00 -18:00	Grouping, segmentation and classification (II)
Mon. Nov. 15th	16:00 -19:00	Project Presentations
Mon. Nov. 22nd		HOMEWORK
Wed. Nov. 24th		HOMEWORK

→ Session1: October 4th
Introduction

→ Session2: October 18th
Follow-up

→ Session3: October 25th
Follow-up

→ Session4: November 3rd
Follow-up

→ Session5: November 8th
Follow-up

→ Session6: November 15th
Final presentations
Report

Project evaluation

- The Project Development PD (80% of the final mark)
 - weeks 1-5 , 5x16%
 - delivered code + slides
 - completion of tasks (additional contributions increase the grades)
 - feedback and questions in class
 - penalization for late submissions (code / slides / questions / i-g eval)
- Intra-group evaluation
 - every week students quantize the % of workload done by each member of the team
- Final project presentation PP (20% of the final mark)
 - All the team members have to present.
 - Evaluated by professors and students $PP = 0.5 \cdot PP^{prof} + 0.5 \cdot PP^{st}$
- The final mark is
$$V = \sum_{i=1}^5 0.16 \cdot PD + 0.2 PP$$

Deliverables: what

- Progress slides (template provided):
 - A Google Slides presentation, with
 - Problem
 - Method / strategy
 - Results (good/bad cases, metrics, plots)
 - **Discussion (comments & conclusions)**
- Source code (GitHub):
 - A **working** version of the Python code developed along the blocks with a README.txt file explaining how to run it
 - Code must be
 - well structured / well commented / use relative paths / ready to be extended
- Like in a real CV challenge: provide results for the test set
 - We will compute performance metrics / ranking of teams
 - Position in the ranking does not influence the grades
- Questions for teams and intra-group evaluation

Deliverables: where

- Progress slides:
 - Google drive with slides per task
 - Share a link to slides in the 'issues' section of the 'deliverables' repository on GitHub
- Source code
 - Team repository on GitHub
- Test masks / results
 - Submit to Google Drive folder
- Two questions for other teams
 - Google docs, [provided](#)
- Intra group evaluation
 - Fill the intra-group evaluation form (a link to be published)

Material

- Dataset
 - Released tomorrow
- Code
 - GitHub repository in organization **MCV-2021-M1-Project**¹
 - Python language

<https://github.com/MCV-2021-M1-Project>

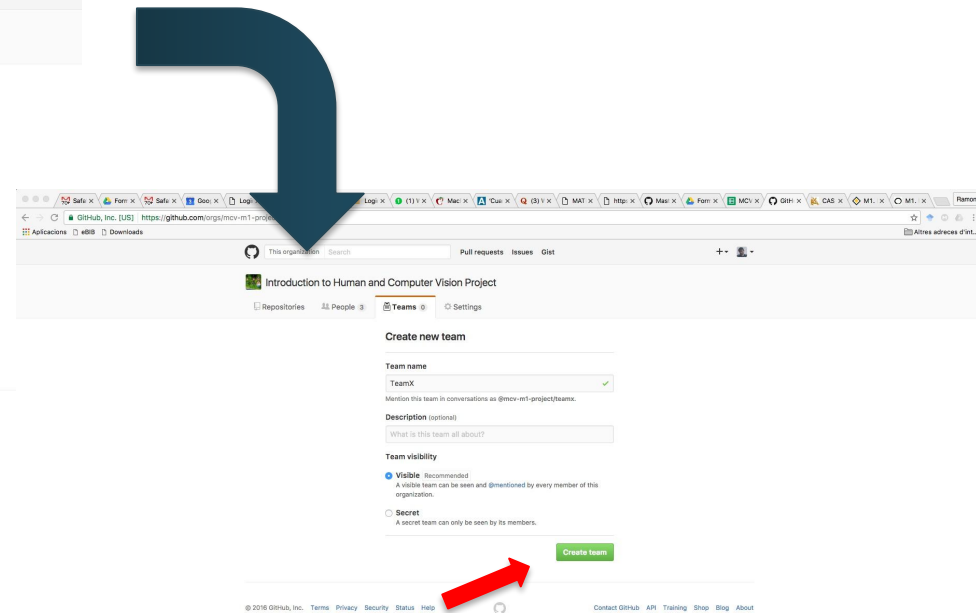

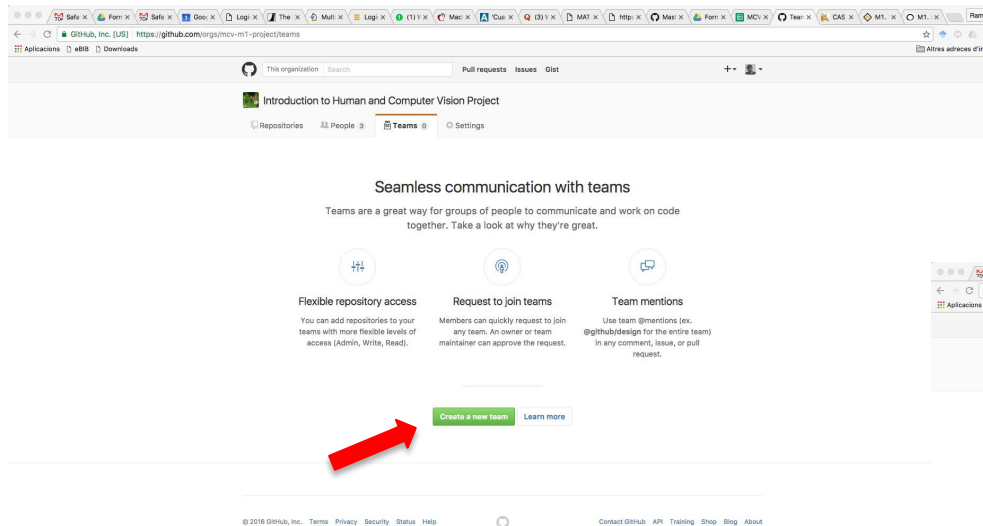

GitHub repository

- Join GitHub by creating a personal account (all students). Enter account info in this [spreadsheet](#)
- We (lecturers) add you to the organization
- Set up a team & repository in the course organization **MCV-2021-M1-Project**¹ on GitHub (team admin)
 - Get your team ID by writing down the team members in [this spreadsheet](#)
 - Login into your GitHub personal account
 - Create a **team** in the GitHub organization with the ID assigned on the spreadsheet (just one person per team)
 - Add members to your team
 - Create a repository in **MCV-2021-M1-Project** with your ID to store your code
 - Give your team write permissions to this repository

<https://github.com/MCV-2021-M1-Project>

GitHub repository

- Once we invited you into the organization ...
- Create a **team** in the GitHub organization **MCV-2021-M1-Project**¹ with the ID assigned on the spreadsheet
- Add members to the team

GitHub repository

- Create a repository in **MCV-2021-M1-Project** with your ID to store your code

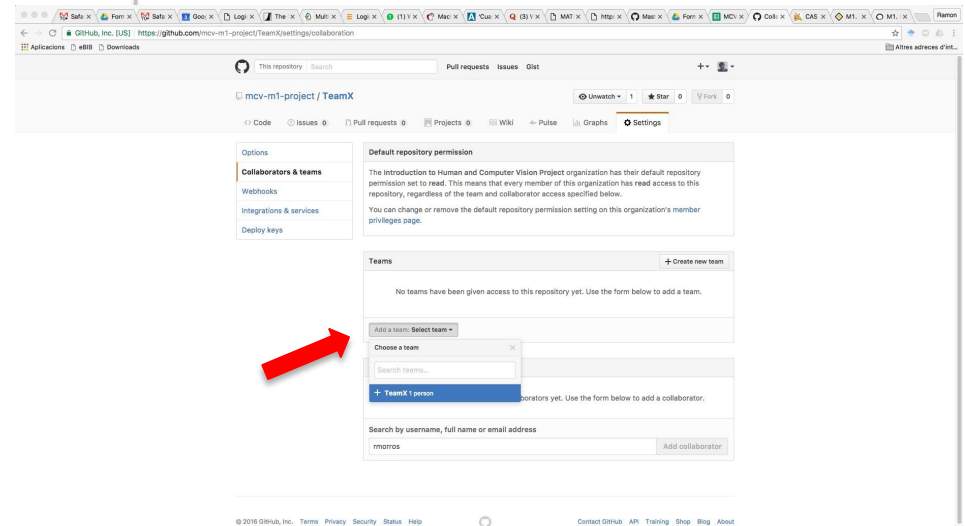

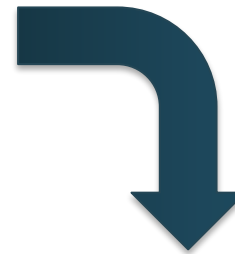

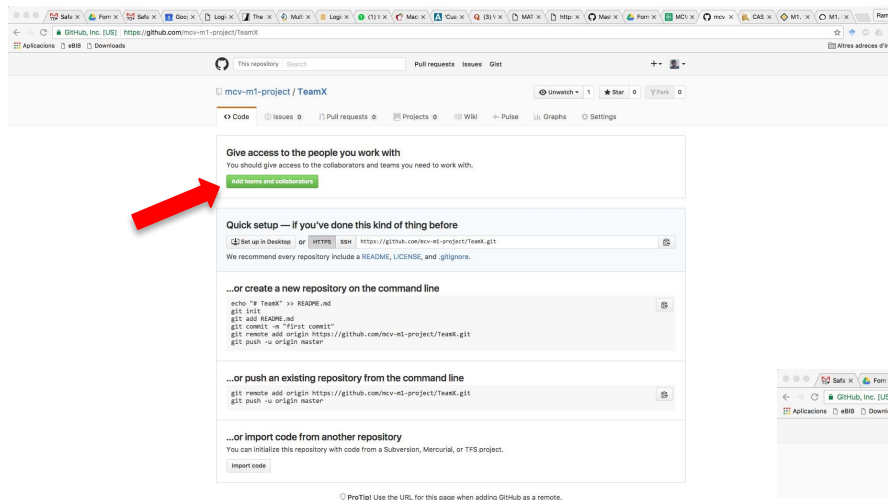

The image shows a sequence of two screenshots from the GitHub website, illustrating how to create a new repository. A large blue arrow points from the first screenshot to the second.

Top Screenshot: Shows the GitHub interface for the organization "Introduction to Human and Computer Vision Project". The "Repositories" tab is active, displaying a list of repositories. A red arrow points to the "New repository" button in the top right of the repository list.

Bottom Screenshot: Shows the "Create a new repository" form. The "Repository name" field is filled with "mcv-m1-project" and has a green checkmark. The "Owner" dropdown is set to "TeamX". The "Description (optional)" field is empty. The "Public" radio button is selected. The "Initialize this repository with a README" checkbox is unchecked. The "Add a license" dropdown is set to "None". A red arrow points to the "Create repository" button at the bottom of the form.

GitHub repository

- Associate the repository with the team.

Intra-group evaluation (IGE)

- Distribute 100 points among the team members (including yourself) according to each member contribution to the work for the week
- Consider quality & quantity of contribution
- Forms will be provided by us after each week submission

Example 1: I consider that all the team members have contributed the same

Example 2: I consider that Verónica did 2/3 of the total work, and Javier and me only 1/6 each
